

PRO PLUG® SYSTEM

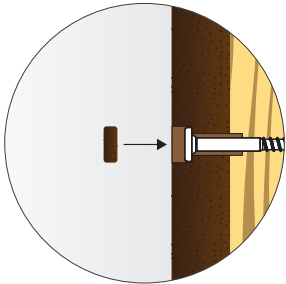

for Fascia

1 Pre-drill using the Fascia Plug Tool

2 Set screw using the PVC/Composite Tool

3 Tap in plug with smooth faced hammer

TREX® APPROVED

The Pro Plug® System for Fascia is a superior and easy-to-install plug fastening system for composite deck fascia. It consists of the following components:

Fascia Plug Tool Set

The Fascia Plug Tool pre-drills a perfectly sized hole for the plug while also allowing the board to expand and contract freely. The PVC/Composite Tool drives the screw to the correct depth and features a No Cam-Out Auto-Stop™ mechanism to prevent the screw from stripping.

Fascia Plugs and Screws

Screws available in Stainless Steel or Epoxy Coated Carbon Steel. All screws feature a star drive recess and are ACQ approved. Plugs are made from actual composite deck fascia material, so they match perfectly.
